PROFESSIONAL SUMMARY

Entry-level Python Backend Developer with hands-on experience designing and building RESTful APIs and backend systems using Django, Django REST Framework (DRF), and PostgreSQL. Experience includes JWT authentication, role-based permissions, relational data modeling, unit testing, and containerized deployment with Docker and Docker Compose. Open-source contributor to ScanCode.io (AboutCode), improving documentation in a production-scale Django codebase. Seeking a Backend Software Engineer / Python Developer internship to build well-tested, well-architected APIs.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, HTML5, CSS3

Backend: Django, Django REST Framework (DRF), Flask, REST APIs, JWT Authentication, Django ORM, Serialization, Pagination, Filtering, Permissions, RBAC, Unit Testing

Databases: PostgreSQL, SQLite, Relational Database Design

Frontend: HTML, CSS, Bootstrap, JavaScript, React (Basics)

Tools: Git, GitHub, Postman, VS Code, Docker, Docker Compose, Render, Netlify

Concepts: OOP, CRUD, Authentication & Authorization, API Development, Database Design, MVT Architecture, Version Control

EXPERIENCE

OpenSource Contributor

Feb 2026 – Mar 2026

AboutCode — ScanCode.io | Remote

Analyzed a production-scale Django codebase (ScanCode.io, a software composition analysis platform) to identify gaps in developer-facing documentation

Submitted pull requests fixing and improving documentation, incorporating feedback from maintainers through revision cycles

Collaborated asynchronously with global maintainers using Git and GitHub

Frontend Developer Intern

Jun 2025 – Jul 2025

CodSoft | Remote

Built responsive web interfaces using HTML, CSS, and JavaScript across multiple project-based assignments, following mobile-first design principles

PROJECTS

TaskFlow MVP – Project & Task Management Platform

Python | Django | DRF | PostgreSQL | Docker | Docker Compose | JWT

- Designed a nested data model (Project → Board → List → Task → Comment) with cascading role-based permissions, so project-level roles automatically govern access to nested boards, tasks, and comments
- Built RESTful CRUD APIs using Django REST Framework for projects, boards, lists, tasks, and comments
- Implemented JWT authentication with custom DRF permission classes to restrict actions by project role (owner/member)
- Wrote unit tests covering core CRUD operations and permission logic using Django's test framework
- Configured a multi-container Docker Compose setup (Django, PostgreSQL) to standardize local environment setup

GloomVault – Destination Review Platform

Python | Django | DRF | PostgreSQL | Docker | Docker Compose | JWT

- Developed RESTful APIs using DRF for destinations, reviews, authentication, and search/filtering functionality
- Implemented JWT authentication and role-based permissions to secure API endpoints
- Designed relational database models using Django ORM, including ForeignKey and Many-to-Many relationships between destinations, reviews, and users
- Wrote unit tests covering API endpoints and authentication flows using Django's test framework
- Deployed the containerized application (Docker, PostgreSQL) to a live environment, accessible at

EDUCATION

Bachelor of Computer Applications (BCA)

2023 – 2026

ATMS Group of Institutions, CCS University — Hapur, UP

CERTIFICATIONS

- Google Cloud Build with AI — Google
- Gen AI Exchange Hackathon — Hack2Skill / Google
- Generative AI Mastermind — Outskill
- Frontend Development Internship Certificate — CodSoft
- JavaScript Bootcamp (Online)

ACHIEVEMENTS

- Open-source contributor to ScanCode.io, a production Django project used by global security teams
- Developed multiple Django REST APIs from scratch, covering JWT authentication, CRUD operations, relational database design, and role-based access control
